EDUCATION

University of California, Irvine

June 2026

Bachelor of Science, Computer Science

Regents' Scholar | GPA: 3.5

- **Relevant Coursework:** Machine Learning, Computer Vision, Database Systems, Operating Systems, System Design, Algorithms, Probability & Statistics

SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, C++, HTML/CSS, Bash

Frameworks/Tools: React, Next.js, Node.js, Express, FastAPI, Docker, Git, REST APIs, Claude Code

AI/Data: OpenAI API, RAG, LLM fine-tuning, pgvector, embeddings, PostgreSQL, MongoDB, AWS (EC2, S3, Lightsail)

EXPERIENCE

AdamsFoods

April 2025 – Present

Software Engineer

Los Angeles, CA

- Owned a production B2B wholesale platform (React, TypeScript, Tailwind), replacing manual phone and email order intake with a self-service ordering portal for recurring wholesale clients.
- Rearchitected inventory system to synchronize state across facilities, replacing manual yield calculations with automated conversion tracking, eliminating 10+ hours of weekly manual calculations.
- Designed PostgreSQL schema and Node.js/Express API handling concurrent order updates across 300+ SKUs with optimistic locking, cutting order processing time by 40%.
- Engineered an OCR pipeline with AWS Textract and GPT-4o mini vision to digitize handwritten supplier forms, validating fields against known SKUs and cutting manual data entry by 50%.

Software Engineer Intern

June 2024 – September 2024

- Developed an inventory tracking application (React, Next.js, MongoDB) with real-time anomaly detection across 300+ SKUs, flagging discrepancies before they compounded into stockouts.
- Containerized with Docker and deployed on AWS Lightsail, replacing handwritten record-keeping with structured digital data entry that cut 5+ hours of weekly manual logging.

COMMUNITY IMPACT

Commit the Change @ UCI

October 2024 – June 2026

Lead Software Engineer, La Peña Cultural Center Project

Irvine, CA

- Delivered React and TypeScript web app for a nonprofit reaching 25,000+ community members, automating 60% of manual financial workflows across departments.
- Led a 12-person engineering team using Agile methodologies to build a scalable REST API with Node.js and PostgreSQL, integrating Google Calendar API for event-driven payments.
- Implemented invoice generation pipeline with Gmail API and Nodemailer using custom PDF templates, eliminating 4+ hours of weekly billing overhead.

AI @ UCI

September 2025 – March 2026

Software Engineer, Sunstone Cities Project

Irvine, CA

- Shipped an LLM-driven pipeline (Python, FastAPI, pgvector) that assembles structured context from raw Census ACS data and generates economic reports for 400+ California cities, cutting production from hours to minutes.
- Integrated OpenAI embeddings with pgvector for semantic retrieval over structured data, grounding all generated narratives in verified source figures to reduce hallucination.

PROJECTS

PocketZot: AI Cognitive Offloading Assistant | React, FastAPI, PostgreSQL, GPT-4o mini

March 2026

- Won Best Neuro Hack at IrvineHacks 2026; prototyped a Chrome extension that classifies cognitive offloading behavior in real time using a fine-tuned GPT-4o mini model served via FastAPI.
- Fine-tuned GPT-4o mini on a custom 5-class taxonomy using a hand-labeled dataset, enabling real-time LLM prompt detection across ChatGPT, Claude, Gemini, and Perplexity.

DineSafe: Restaurant Health Inspection Platform | React, Node.js, MongoDB, Python

Dec 2025

- Won 2nd Place at UCI Hackathon; delivered a full MERN app with Google Maps API surfacing health inspection data for 400+ restaurants to help users make safer dining decisions.
- Wrote a Python scraper extracting 300+ inspection reports and integrated OpenAI GPT API to auto-generate violation summaries, cutting manual review time.
