EDUCATION

University of California, Irvine

June 2026

Bachelor of Science, Computer Science

- **Relevant Coursework:** Data Structures, Algorithms, Machine Learning, Computer Vision, Database Systems, Software Testing, Operating Systems, Probability & Statistics, Discrete Math/Linear Algebra, System Design

SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, C++, HTML/CSS, Bash

Frameworks/Tools: React, Node.js, Express, Next.js, FastAPI, Docker, Git, REST APIs, Claude Code

Cloud/Databases: AWS (EC2, S3, Lightsail), PostgreSQL, MongoDB, OpenAI API, RAG

EXPERIENCE

AdamsFoods

April 2025 – Present

Software Engineer

Los Angeles, CA

- Architected a production B2B wholesale platform (React, TypeScript, Tailwind), replacing manual phone and email order intake with a self-service ordering portal for recurring wholesale clients.
- Designed PostgreSQL schema and Node.js/Express API handling concurrent order updates across 300+ SKUs with optimistic locking, cutting order processing time by 40%.
- Deployed on AWS EC2 with S3 asset storage, Docker containerization, and CI/CD via GitHub Actions; built admin dashboard for real-time order tracking across all accounts.
- Engineered an OCR pipeline with AWS Textract and GPT-4o mini vision to digitize handwritten supplier forms, validating fields against known SKUs and cutting manual data entry by 50%.

Software Engineer Intern

June 2024 – September 2024

- Built an inventory tracking application (React, Next.js, MongoDB) from a self-authored requirements spec, flagging inventory discrepancies in real time via automated anomaly detection across 300+ SKUs.
- Containerized with Docker and deployed on AWS Lightsail, replacing handwritten record-keeping with a structured digital data entry workflow that cut 5+ hours of weekly manual logging.

COMMUNITY IMPACT

Commit the Change @ UCI

October 2024 – June 2026

Software Engineer, La Peña Cultural Center Project

Irvine, CA

- Delivered React and TypeScript web app for a nonprofit reaching 25,000+ community members, automating 60% of manual financial workflows across departments.
- Collaborated in a 12-person team using Agile methodologies to build a scalable REST API with Node.js and PostgreSQL, integrating Google Calendar API for event-driven payments.
- Engineered invoice generation pipeline with Gmail API and Nodemailer using custom PDF templates, eliminating 4+ hours of weekly billing overhead.

AI @ UCI

September 2025 – March 2026

Software Engineer, Sunstone Cities Project

Irvine, CA

- Built a Python/FastAPI backend automating economic report generation for 400+ California cities, chunking Census ACS data and retrieving city context via vector similarity to drive LLM narratives.
- Integrated OpenAI embeddings with pgvector for semantic retrieval over structured ACS data, grounding generated narratives in verified Census figures and cutting report production from hours to seconds.

PROJECTS

PocketZot: AI Cognitive Offloading Assistant | React, FastAPI, PostgreSQL, GPT-4o mini

March 2026

- Won Best Neuro Hack at IrvineHacks 2026; built Chrome extension classifying cognitive offloading behavior in real time using a fine-tuned GPT-4o mini model served via FastAPI backend.
- Fine-tuned GPT-4o mini on a custom 5-class taxonomy of cognitive offloading behaviors using a hand-labeled dataset, with real-time prompt detection across ChatGPT, Claude, Gemini, and Perplexity.

DineSafe: Restaurant Health Inspection Platform | React, Node.js, MongoDB, Python

Dec 2025

- Won 2nd Place at UCI Hackathon; built full MERN app with Google Maps API surfacing health inspection data for 400+ restaurants, helping users make safer dining decisions.
- Developed Python scraper extracting 300+ inspection reports and integrated OpenAI GPT API to auto-generate violation summaries.
